ABOUT ME

I am a recent graduate of RBK's full-stack developer program with a background in automation and the IT industry. While working in automation, I discovered my passion for IT and now wish to transition fully into the field. I am excited to join a company where I can continue to learn and gain more experience in the IT industry.

PROJECTS

KRAKEN HIRE (MOBILE APP DEVELOPMENT, TEAM PROJECT, 1-MONTH DURATION)

ReBootKamp (RBK), Ariana / février 2023 –mars 2023

- As part of the team responsible for developing KrakenHire, a mobile app that streamlines the process of hiring skilled workers for various services, I played a critical role in creating the app's back-end functionality. Leveraging technologies such as React Native, Express, Node.js, Sequelize, and MySQL, I designed and implemented a robust system for managing app data. Additionally, I ensured user privacy and security by implementing secure Firebase authentication. To enhance the overall user experience, I also designed and implemented features that allowed users to provide feedback through comments, reviews, and ratings.

BRAIN LAB (WEBSITE DEVELOPMENT, TEAM PROJECT, 1-WEEK DURATION)

ReBootKamp (RBK), Ariana / février 2023

- Brain Lab is a website that provides a platform for students to purchase courses. The website features a user-friendly interface for both teachers and students and was built using technologies such as MySQL, Sequelize, React, Node.js, and Express.

- As part of the development team, my responsibilities included implementing the cart functionality for both the front and back, as well as developing the homepage to create an engaging user experience. Additionally, I utilized the context API with useContext and useReducer to ensure that data was effectively managed throughout the website.
